Network Administrators use passwords to secure their network from unauthorized users. However, if a user forgets or loses the password, they can't access the secured information. This can cause real problems. When a user loses their password, they must first perform the highly technical process of restoring the NT Password File by using the Command Prompt. Then, they must change the password from the Command Prompt and set the correct password on the NT Password File, then log off and log back on again. Password Recovery software can make the whole process simpler and faster. With Nucleus Network Password Recovery you can retrieve passwords for users who are locked out of the network and for those accounts that are used on computer security programs, such as anti-virus software, to provide protection to your system. Nucleus Network Password Recovery solves the problem of users trying to access and use a network but having forgotten their passwords. The software scans the available NT Password files looking for the user ID of the user whose password you want to recover, and then retrieves their password. It is 100% safe, it does not harm your computer or any of your data, and it requires no technical knowledge to use. Nucleus Network Password Recovery does not need any privileges to run.
