## Selective Data Backup Download

Selective Data Backup is a free DOS command line utility that can copy the contents of a directory to an empty directory. It allows you to specify specific files or directories and selectively copy the contents to the empty directory. The option to copy the contents of a directory was actually added in Selective Data Backup as a requirement. You might have noticed that this utility copies all the file size information as well. This utility might be handy if you want to backup your downloaded files or other large files that might not fit in your hard drive. Another use of this utility is to create a backup of your MS-Office documents. Many of our readers wanted to know how to create a selective copy of the file contents. We have developed Selective Data Backup to meet the requirement as you have mentioned in your comments. Here is a simple explanation of how it works.

Create Selective Data Backup: Step 1: You need to create a new directory for your selective copy of data. Step 2: Download and unzip Selective Data Backup to a directory. Step 3: Open the Selective Data Backup program. Step 4: Now you need to create an empty directory for your file to copy to. Step 5: Press Y to create a new empty directory. Step 6: Enter the path to the directory where you want to store the selective file contents. Step 7: Click OK and check for the validation. This is how you can create a selective copy of data.
