Godstrike is like bullet hell but with a twist. Instead of the bullets flying around in complete chaos, the Bullet God puts you in the thick of it and forces you to react at lightning speed. Godstrike Gameplay: If you can get used to the fierceness of the single player this game will leave you grinning from ear to ear. Have you ever played Godrage? If you have, you will understand the concept. Godrage Gameplay: Godrise is everything Bullet God is and more. Straight up, fun as hell. It is the only "Bullet Hell" clone that is good. 6/10 DEMOS, IT'S A LIVE GAME! The very first time I played this game I pretty much died a thousand times. Live dungeon mode is what sets this game apart. I love this game and it shows. Don't let the demo fool you, get the full game. 9/10 ZCODEMONKEYES The random events are insane! 7/10 XGEAR The game play is thrilling. 9/10 ZCORDEMONKEYES THE EXTRAS ARE INCREDIBLE! 9/10 XGEAR 9/10 INDEX'S GAMESITE Xgear is the perfect mix of bullet hell and classic arcade games. Listen to me now, you must buy this game. Do not pass up this opportunity for the lowest price of ANY player's life. 9/10 FISTMASSHONIGLE Completely engaging and addicting game play. Love it. 8/10 PC INDEX I'm like most of you who have played this game, it's totally awesome. Sometimes though, the game becomes overwhelming and turns into this super long game. You can end up spending 20+ minutes in a single situation. If it's not a situation where you can die, I will stay and wait for the next boss, it's a total pain and I don't really enjoy it. So what's the verdict? Would I buy this game again? Yes, of course, for the same reasons I bought it the first time. It's so hard at times I can't see the point of playing because I'll just be bored out of my mind at times. But it is the challenge, make no mistake. This game is amazing for the Sega Dreamcast. It was the first game I bought for the Sega Dreamcast, and I know I'm going to buy it again. I think

The cognitive ability of children with autism spectrum disorders, children with attention-deficit/hyperactivity disorder (ADHD) and control children: do alexithymia and slow cognitive style moderate the cognitive abilities of children with an autism spectrum disorder? Prosocial behaviour of children with an autism spectrum disorder (ASD) can be impaired by both alexithymia and a slow cognitive style. This cross-sectional study examined whether individual differences in the alexithymia and cognitive styles of these children were related to their ability to solve Raven's Advanced Progressive Matrices (APM). The APM has ten sets of problem items, each containing 24 items, so that the problem solving of all children can be assessed simultaneously. Using multivariate regression, relationships were sought between alexithymia (Toronto Alexithymia Scale, TAS) and cognitive styles (Bender-Gestalten Coping Scale, BGC; California Psychological Inventory 2, CPI 2; Suinn-Lew Asian
