A transmission path used for an electronic device has a high transmission speed and high impedance. Because of this, the electronic device has a high fault rate. A technique for reducing the fault rate is proposed. In this technique, a transmission path used for a portable terminal is made longer or wider in order to increase the distance between a main body and a portable terminal. This technique can increase the transmission speed. However, the increase of the transmission path gives a bad effect on the miniaturization of the portable terminal. Therefore, the transmission path is not made longer or wider. As another technique, Japanese Unexamined Patent Application Publication No. 2008-82233 discloses a technique of suppressing an increase in the fault rate by providing a plurality of base stations. In this technique, the direction where the main body is located at the time of standby is taken as a direction of reference and a redundant base station is provided in the direction of reference to be able to reduce the fault rate. The Trump administration is considering imposing new sanctions on Venezuela, according to a report by The Wall Street Journal. The Wall Street Journal reported on Sunday that the Trump administration is looking to impose sanctions on Venezuelan military officials and companies in an attempt to end the country's crisis. The new sanctions could also include prohibiting U.S. companies from lending to Venezuela's government, the report added. ADVERTISEMENT These efforts follow an international move from the United States and other governments earlier this month to recognize Juan Guaido as the country's rightful leader. The U.S. recognizes Guaido as the country's interim leader, prompting Maduro to accuse the Trump administration of orchestrating the move.
