As features of quickshare Center Rockola A column shows its prices and in Table 1.06.. The current version of the software allows us to carry out any type of type of receipt. The program does not support the following input types: .Q: grails render a large jpg on the client I have an image that i have to render on the client side, the image is large (~50mb) The client side is PhoneGap Image is loaded from the server and then the is converted to a base 64 String I can save the byte [] in a db and load it at the server end, or convert the string to a Base64ByteString and save it in the db OR I can convert the image to a BufferedImage and i can save it in the db and render it in javascript using the new HTML5 canvas api The first two options look the simplest to me, But what do you guys think should i do. A: I would recommend the 3rd option. It's really no more code than the 2nd option and is likely to result in less client overhead. 1. Field of the Invention The present invention relates to a lipophilic polymer which is suitable for use in an oil-in-water type emulsion cosmetic preparation, an oil-in-water type emulsion cosmetic preparation, a hair cosmetic preparation and a hair cosmetic preparation. 2. Description of the Prior Art Heretofore, in the field of cosmetics, various kinds of oil-in-water type emulsion preparations have been suggested. However, satisfactory products have not yet been obtained and various problems such as an unpleasant feeling when using the products, separation, agglomeration, precipitation of the emulsion components and the like have existed. Among these, separation of emulsion components from the emulsion cosmetic preparation is a problem which is particularly remarkable. When the emulsion cosmetic preparation containing components such as oily components, a film forming agent, and so on, is left standing for a long period, the emulsion components are separated from each other by gravity. Such separation tends to be remarkably caused by the increase of the viscosity of the emulsion due to the reaction of the components. As methods for preventing the separation, for example, Japanese Patent Publication No. 5,165/79 discloses a method of preparing an emulsion cosmetic preparation by adding a high molecular weight c6a93da74d
