
Flexisignpro76v2hardwarekey39 UPD

i want to get rid of that output. i tried using the `str.startswith(flexisignpro76v2hardwarekey39)`. but no luck. what is the best solution to this: `!(p[3].group(0)==flexisignpro76v2hardwarekey39 for windows 10 crack).match(.*(.*).group(1).split(,).length)` this handles the case where it is [] have a tough time with this. i am trying to use this (import codecs). but it is throwing an exception. any help? this code finds the key in a text file but i want to replace it with another string. key == index of the key in the text file. i tried the following code but it is not working. would someone help me?

```
import codecs
import re
import os
os.chdir("/users/felix/desktop/sample")
if len(os.listdir("/users/felix/desktop/sample")) == 0:
    os.mkdir("/users/felix/desktop/sample/keyfile")
    os.chdir("/users/felix/desktop/sample/keyfile")
else:
    print("the directory is already present!")
os.chdir("/users/felix/desktop/sample/keyfile")
with open(f"keyfile/{str(os.getpid())}.txt", "w") as f:
    f.writelines([os.getpid()+".txt"])
os.chdir("..")
f.close()
# you will have to change this line otherwise it will delete the file
# f.write("*to search for a product key open a file in excel and copy the data into the first cell of the first row, then paste it into notepad, search for the string `product key" and paste the line containing the key into cell d2. save the file as key.txt")
for f in os.listdir("keyfile/https//flexisignpro76v2hardwarekey39"):
    f = f.replace("https://", "")
    if len(f.split(" ")) > 0:
        os.chdir("keyfile/https//flexisignpro76v2hardwarekey39/"+f)
        os.chdir("..")
        with open(f"keyfile/{str(os.getpid())}.txt", "w") as f:
            for f in os.listdir("keyfile/flexisignpro76v2hardwarekey39/key.txt"):
                if f.count("-") == 0:
                    if not str.startswith(f"keyfile/{str(os.getpid())}.txt"):
                        # you will have to change this line otherwise it will delete the file
                        # print("creating the key.")
                        f = codecs.open(f"keyfile/{str(os.getpid())}.txt", "w", encoding="utf-8")
                        f.write(f"keyfile/{str(os.getpid())}.txt")
```
