Hepatitis C virus-RNA and p22-immunoreactive amyloid of the adrenal medulla. The aim of this work was to verify the association of hepatitis C virus (HCV) and C22-immunoreactive amyloid (C22-I) of the adrenal medulla with polyarteritis nodosa and systemic primary amyloidosis. Complementary DNA from HCV cDNA was used to prepare a 5' end labelled probe by in vitro transcription. The brain and adrenal tissue of 11 cases showing the above-mentioned diseases were examined for the presence of HCV-RNA and the results were compared with the C22-I positivity of the tissue sections. HCV-RNA was present in 5 of 11 adrenal medullary cases and in 9 of 11 cases of systemic amyloidosis. Three adrenal medullary cases displaying moderate IAAC positivity and negative C22-I were not infected with HCV. The presence of the virus 79a2804d6b
